

# Above and Beyond.

**NOW IN STOCK**

## Raising the Bar By Lowering Emissions

At Bonney Forge, we are setting a new standard for low emissions. Our Cast Steel Valves are designed, engineered, manufactured, and tested to exceed the new API 622 2nd edition requirements as our standard. Requirements include:

- Bonney Forge Eco-Seal™ Low E packing
- Validated leakage below 50 ppmv (Method 21 monitoring) exceeding EPA "Enhanced LDAR" Consent Decree requirements
- 5 thermal cycles during testing (ambient to 500°F)
- Packing torque unchanged with no packing adjustments or additional torque required for the duration of the test
- Testing conducted by third party

We go above and beyond the current API standards, such as using state-of-the-art testing equipment to perform helium leak test sampling on all production valves, ensuring the highest quality Low E Cast Steel Valves available anywhere as a standard.
